About

Frontend Developer with over **3 years** of commercial experience specializing in React and JavaScript. Built a full cycle of development - from gathering product owner requirements to establishing a fully automated release process. Expert in functional reactive programming and declarative UI implementation. A dedicated and collaborative team player, focused on solving complex business problems and delivering high-quality, scalable solutions. Actively seeking opportunities to contribute to forward-thinking projects and further professional growth.

English Level - C1

Skills

- **Extensive Experience:** JavaScript, HTML5, CSS3, (SCSS, SASS, Less)
- **Strong Proficiency:** React.js, Typescript, REST API, React Hooks, Zustand, Vite, Bootstrap, Git, GitHub, GitLab, Bootstrap, Styled Components, Axios, Tailwind CSS, Material UI, Radix UI, Chakra UI
- **Solid Foundation:** Vue.js, Next.js, WebSocket, ZOD, i18next, Vercel, Framer Motion, GSAP, Lottie, GraphQL, Lighthouse, Google Analytics (ReactGA)

Work Experience

Voltum Startup - Frontend Developer

July 2024 - January 2025

Voltum Mini App - Voltum is a Telegram Mini application offering a series of competitive money-based games built around player interactions.

- **Game Development and Release:** Created real-time, interactive games from concept to launch, supporting thousands of simultaneous players. Incorporated randomness mechanics using WebSocket and REST API for smooth and engaging gameplay
- **Real-Time Game Logic Design:** Built efficient game logic with updates every **0.25 seconds** to ensure responsive and seamless gameplay, even during high activity
- **Feature Proposal and Traffic Growth:** Introduced and implemented a new feature that **doubled product traffic** and boosted user engagement
- **Collaboration with Backend and QA Teams:** Worked closely with backend developers and QA testers to improve functionality, fix issues, and deliver a smooth user experience
- **Performance Optimization:** Optimized the entire application by implementing **Code Splitting, Lazy Loading** of components and assets, and background image loading. Actively utilized **Dev Tools** and resource monitoring to identify bottlenecks, **improved load time by 50%**
- **CSS Modules and Component Development:** Established reusable CSS modules and UI components, maintaining consistent design and scalability. Used BEM methodology and CSS-in-JS tools (e.g., Styled Components, Emotion), cutting down duplicate styles by **30%** and speeding up feature development

Tools & technologies: React.js, Next.js, Typescript, Zustand, Javascript, Tailwind CSS, Axios, Framer Motion, ZOD, WebSocket, REST API, Telegram mini apps techs

Cowchain - Frontend Developer

June 2023 - July 2024

[X Bull Run Protocol](#) - Decentralized smart swap platform for crypto pools, allowing asset swaps

[Raiser](#) - Web3 platform combining merit-based token allocations with a lottery system

- **Web3 Integration:** Integrated MetaMask and Trust Wallet into React applications, along with backend integration using Axios, REST API, and Swagger

Implemented smart contract functionality for token pool deposits and withdrawals

- **Telegram Bots:** Developed Telegram bots, **including one with 30 million users**, enabling user invitations, friend additions, and token-earning functionality
- **Web3 Mini-Game:** Built a mini-game with registration, authentication, and multiplayer competition using randomized elements to enhance gameplay
- **Team Leadership & Mentorship:** Led developer onboarding, enforced project documentation, and mentored junior developers through code reviews, ensuring smooth integration and maintaining high code quality
- **Efficiency Improvements:** Introduced a technology that doubled development speed, significantly improving project timelines

Optimized team workflow by implementing a sprint system, enhancing overall project management and team performance

Tools & technologies: React.js, Typescript, CSS/SCSS, Tailwind CSS, Material UI, Radix UI, Styled Components, Axios, REST API, Wagmi, Web3 React

Azgard - Frontend Developer

January 2023 - May 2023

[Coxit](#) - A leading Ukrainian tech firm known for its innovative software solutions and expert team. They specialize in custom software development, focusing on security, scalability, and creativity to drive business growth

- **Multi-User Applications & Admin Panels:** Developed large multi-user applications and admin panels, ensuring efficient user management and streamlined admin functionality

Increased product traffic by over 200% through a feature that significantly boosted user engagement. Led client meetings in English, proposing business solutions and improvements to address key requirements

- **Mini-Games:** Built interactive mini-games with randomness mechanics using **Javascript**, enhancing user engagement and retention

Actively mentored junior developers, sharing implementation techniques for new features to foster team growth and improve development capabilities

- **Responsive Email Templates:** Created and adapted mobile-responsive email templates, ensuring compatibility across email clients through thorough testing with Putsmail and Litmus

Contributed to improved effectiveness of email campaigns and enhanced user reach

- **E-commerce Websites:** Contributed to the development of responsive e-commerce websites, focusing on layout implementation for optimal functionality and user experience

Integrated essential plugins to deliver customer-friendly sites that improved usability and satisfaction

- **Project Efficiency:** Delivered three large projects within a single month, demonstrating strong time management, problem-solving skills, and the ability to perform under pressure

Tools & technologies: HTML, SCSS/SASS, CSS, Javascript, Gsap, AOS

- **Web3 Application Development:** Developed innovative Web3 applications, building functionality to support decentralized features and ensure a seamless user experience

Integrated cutting-edge blockchain components for next-generation web interactions

- **Mobile Interface Design:** Meticulously designed intuitive mobile interfaces, implementing UI components from scratch, including dropdowns, selects, and modal windows. Focused on usability and aesthetics to elevate the mobile user experience
- **Responsive Design Optimization:** Created fully responsive designs optimized for mobile devices and tablets, ensuring seamless adaptability and performance across diverse screen sizes for a consistent user experience
- **Custom Scroll and Animation Effects:** Designed engaging scroll animations and custom visual effects using HTML, CSS, AOS, and GSAP, enhancing interactivity and improving user engagement through smooth, visually appealing transitions

Tools & technologies: HTML, SCSS/SASS, CSS, Tailwind CSS, Javascript, AOS
